

Katana vs. Millennia = Basic vs. Custom

Katana, our value frameless line, was created to provide designers a budget-friendly option when price is the main factor in a project.

Katana is all about simplicity, with a streamlined selection of door styles, woods and finish options. At the same time, you'll find a broad range of SKUs with Katana, offering plenty of flexibility when designing a basic full access cabinet package.

We also made sure the line fits today's love of clean, modern design. With TSS and High Gloss Laminate options, you can offer your customers an on-trend design at a great price.

It's important to note that Katana is 5/8" construction as opposed to the 3/4" material found in Millennia. We designed Katana with a captured back for stability and a full top with routed openings for ease of installation.
